

BUSINESSOBJECTS DATA QUALITY MANAGEMENT FOR SAP SOLUTIONS

ENSURE DATA QUALITY FOR SAP® APPLICATIONS

When implementing an enterprise resource planning (ERP) or customer relationship management (CRM) system from SAP, you must prevent and eliminate duplicate entries, and verify and correct data that's loaded into the system. Thousands of organizations add value to their enterprise applications by improving the quality of their business partner, customer, and supplier data – without depending on a large staff or IT budget.

BusinessObjects™ Data Quality Management for SAP® Solutions allows you to maximize the value of your organization's investment in SAP solutions. Business Objects, an SAP company and a leader in data quality software, offers you an SAP-certified solution that seamlessly integrates data quality directly into SAP applications – and helps your users ensure that only accurate information enters your systems. In addition, by offering implementation from a single point of configuration, our software reduces total cost of ownership. It also provides you with global data processing abilities and the flexibility to tailor customer-specific business rules.

Benefits of BusinessObjects Data Quality Management for SAP® Solutions

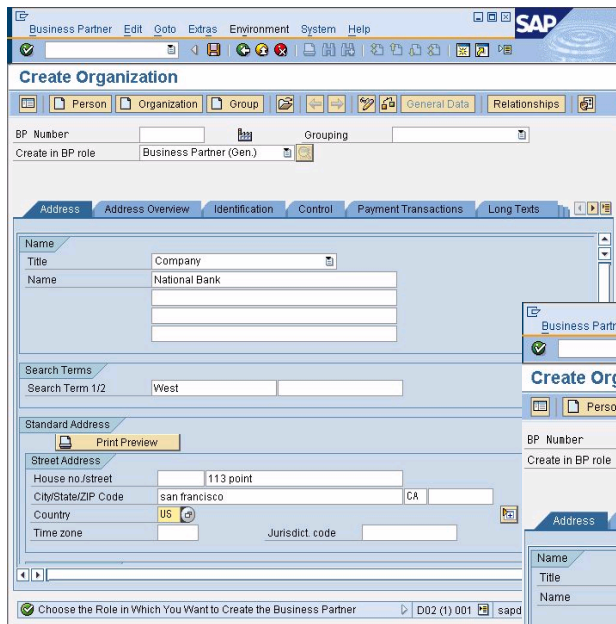

Extensive coverage for global postal validation processes – over 190 countries in a single pass

Comprehensive duplicate checking prevents storage of redundant information without the need to import or export data for processing

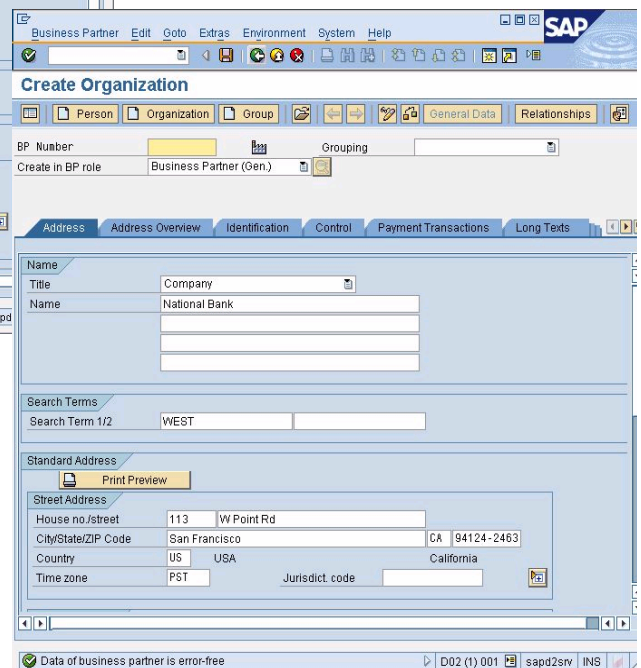

Quick address-entry technology identifies and standardizes global addresses with minimal data, quickly and accurately

Convenient, error-tolerant searching allows users to identify customer, vendor, and business records with limited amounts of information

Data-cleansing technology parses, standardizes, re-fields, and corrects customer information – and enhances it, using empirical data sources

In the before-and-after screenshots seen here, after a record is entered, the BusinessObjects Data Quality Management for SAP Solutions features are invoked to correct components of the address, validate the address based on referential data sources, and format the address according to the norms of the applicable country.

ENSURE DATA DISCIPLINE THROUGHOUT THE ENTERPRISE

BC-BAS-PV
(Business Address
Service Postal
Validation)

BusinessObjects Data Quality Management for SAP Solutions Supports Quick Address Verification

BC-BAS-DES
(Duplicate Check
and Error Tolerant
Search)

BusinessObjects Data Quality Management for SAP Solutions enforces data discipline at numerous touch points within SAP ERP and CRM solutions. Using the SAP Postal Validation and/or Duplicate Check and Error Tolerant Search interface, our data quality software supports quick address verification while preventing duplication of stored information. This benefits your organization by improving efficiency of business processes, increasing system adoption, and improving service to your clients and business partners.

Certified for the
SAP NetWeaver®
open integration
and application
platform

Additionally, error-tolerant searching lets you conveniently search through your application to locate similar records, when only portions of address elements of that record are known. This convenience can be a competitive advantage – allowing you to quickly and accurately identify and serve your customer, vendor, or business partner.

BusinessObjects Data Quality Management for SAP Solutions Quickly Verifies Addresses While Eliminating Duplication

NAVIGATE QUICKLY AND ACHIEVE ACCURATE IDENTIFICATION

Business Objects designed timesaving tools to help you navigate effortlessly through your SAP application. BusinessObjects Data Quality Management for SAP Solutions offers an upfront interactive address interface to complete addresses with minimal data. When the address information entered is ambiguous, the software immediately suggests alternative matches. Our easy address system is ideal in any transactional environment in which the user has a limited portion of a vendor or business partner address.

UNDERSTAND YOUR CUSTOMER – AND INCREASE USABILITY

BusinessObjects Data Quality Management for SAP Solutions also enhances the quality of information by identifying redundant data and preventing duplicate entries, which often are caused by integrating multiple systems into a single platform. Our quality solution also allows you to update and add new information to existing records for a single, comprehensive view. As a result, your customer receives a better experience when interacting with knowledgeable customer representatives – and your organization lowers the cost of acquiring and servicing customers.

NOW IS THE RIGHT TIME FOR DATA QUALITY SOLUTIONS

Maximize the value of your investment in SAP solutions by increasing the value of your largest asset – data. Whether you're implementing an SAP solution or it's already up and running, data quality is a prerequisite to success. For more information, visit our website at www.businessobjects.com/sap.
